

Automotive Case Study (Stumpp, Schuele & Somappa, India – Front-End Spring Design)

India's "Number 1" spring manufacturer SSS, Stumpp, Schuele & Somappa (www.sss-india.com), cater to major automotive OEMs. SSS uses NEi Nastran to design better and more reliable products.

Waveaxis Technologies, reseller of NEi Nastran, custom-built a front-end spring design software with NEi Nastran solver in the background to validate and optimize spring designs for various operating conditions in a suspension system. This is solved as nonlinear static solution with surface contacts available within NEi Nastran. The results of NEi Nastran exactly correlate the experimental results.

This has benefited SSS to create better designs, reduce costs and minimize design time from 10 days to 1 day; thus adding better value to their customers.

NEi Software, Inc. is aggressively focused on commitment to the customer. Detailed documentation, customized on-site training, and comprehensive technical support ensures that you will see immediate return on your investment.
